ESCUELA PROFESIONAL DE INGENIERÍA DE SISTEMAS

“Proyecto de Unidad 3 - Gestión de Viajes-Metricas”

Integrantes:

Nº	Código Universitario	Apellidos y Nombres
1.-	2017057528	Ccalli Chata, Joel Robert
2.-	2020067145	Anahua Coaquira, Mayner Gonzalo
3.-	2020069046	Salinas Condori, Erick Javier
4.-	2020066924	Zevallos Purca, Justin Zinedine

CURSO : “Base de Datos II”

SECCION : “A”

DOCENTE : Ing. “Patrick Jose Cuadros Quiroga”

Tacna - Perú

2023

INTRODUCCIÓN:

1.- OBJETIVO::

Objetivo general

Desarrollar e implementar una solución integral y automatizada de microservicios en la nube para la gestión de viajes, que permita una interacción eficaz y segura entre diversos servicios especializados, asegurando una experiencia de usuario óptima, alta disponibilidad, escalabilidad y un rendimiento consistente del sistema.

Objetivos Específicos

Diseñar la Arquitectura de Microservicios: Crear un diseño detallado de la arquitectura que defina cómo los diferentes servicios interactuarán y se integrarán entre sí.

Implementar la API de Gestión de Viajes: Codificar y desplegar una API robusta que maneje las operaciones de reserva, consulta y cancelación de viajes.

Desarrollar Servicios de Soporte: Construir servicios complementarios que incluyan gestión de usuarios, configuración y notificaciones, asegurando su correcta integración con la API principal de viajes.

Automatizar el Proceso de Despliegue: Establecer un pipeline de CI/CD que permita el despliegue automático y la integración continua de los microservicios en la plataforma de nube elegida.

Configurar Monitoreo y Métricas: Integrar un sistema de monitoreo con Prometheus y Grafana para recolectar, almacenar y visualizar métricas clave del rendimiento del sistema.

Validar la Escalabilidad del Sistema: Realizar pruebas de carga para asegurar que cada microservicio pueda escalar adecuadamente en respuesta a las demandas del sistema.

Garantizar la Seguridad del Sistema: Implementar mecanismos de autenticación, autorización y cifrado para proteger la información y las operaciones del sistema.

Producir Documentación Completa: Elaborar documentación técnica para desarrolladores y manuales para usuarios finales y administradores del sistema.

Realizar Pruebas Exhaustivas: Llevar a cabo pruebas unitarias, de integración y de sistema para asegurar la fiabilidad y estabilidad del sistema completo.

Asegurar la Calidad del Servicio: Establecer protocolos de calidad de servicio (QoS) para mantener la experiencia del usuario y la satisfacción del cliente.

2.- ALCANCE:

El proyecto tiene como objetivo el diseño e implementación de una arquitectura de microservicios para una aplicación de gestión de viajes en la nube. El alcance específico del proyecto incluye:

Desarrollo de una API de Gestión de Viajes: Crear y documentar una API robusta que proporcione funcionalidades para la reserva y gestión de viajes, utilizando principios RESTful y especificaciones OpenAPI.

Integración de Servicios Complementarios: Incorporar servicios adicionales como gestión de usuarios, configuración, notificaciones y bitácora, cada uno con su propia base de datos y lógica de negocio.

Automatización de Despliegue: Configurar y validar un pipeline de CI/CD para el despliegue automático de los microservicios en un entorno de nube, utilizando Docker Compose para la orquestación.

Monitoreo y Métricas: Establecer un sistema de monitoreo utilizando herramientas como Prometheus y Grafana para recoger, almacenar y visualizar métricas en tiempo real.

Escalabilidad y Rendimiento: Asegurar que cada microservicio sea escalable de forma independiente y que el sistema en conjunto mantenga un alto rendimiento bajo diferentes condiciones de carga.

Seguridad: Implementar medidas de seguridad para proteger la aplicación, incluyendo la autenticación y autorización de usuarios, así como la seguridad en la comunicación entre servicios.

Documentación: Proporcionar documentación técnica detallada para cada uno de los servicios, así como guías de usuario y administración del sistema.

Pruebas: Diseñar y ejecutar un plan de pruebas completas que incluya pruebas unitarias, de integración, de carga y de seguridad para garantizar la robustez del sistema.

Entrega: El sistema debe estar completamente operativo y desplegado en la nube con todos los servicios funcionando de manera integrada para la fecha [insertar fecha de finalización].

3.- CONVENCIONES Y ESTÁNDARES DE NOMBRES:

General:

Aplicación	Método	Ejemplo
Clase	UpperCamelCase	MyClass
Método	lowerCamelCase	verHistorial()
Variable	snake_case	\$sala_disponible
Tabla de base datos	snake_case + plural	empleados_grupos
Campos de una tabla	snake_case	nombre_empleado
URLs	Separar palabras con guión	localhost:8000/model/some-url

¿Qué es JSON?

JavaScript Object Notation

Es una sintáxis creada para codificar objetos en JavaScript

Su uso se ha extendido mucho como alternativa a XML por lo que se considera un formato independiente de dicho lenguaje.

¿Qué es un API?

Application Programming Interface, Interfaz de Programación de Aplicaciones.

Es decir una interfaz que permite crear aplicaciones que usan determinado recurso.

Una API web usar el protocolo HTTP para lograr dicho objetivo.

¿Qué es un API REST?

- Es una API web que sigue determinado estándar de facto.
- El intercambio de información se basa en el uso de HTTP.
- Usa un protocolo cliente-servidor sin estado. No pueden usarse cookies para mantener el estado de la sesión.
- Cacheable. Una respuesta puede definirse como cacheable para evitar peticiones recurrentes.
- Hipermedia como motor del estado. A partir de una dirección principal pueden obtenerse enlaces a todos los recursos del servicio.
- Se define un conjunto de operaciones: GET, POST, PUT, DELETE.
- Las operaciones CRUD se pueden asimilar al anterior conjunto y a unas rutas determinadas:

Función	Tipo de método	Nombre
Ver el detalle de un registro.	GET	show()
Listar registros de una tabla.	GET	index()
Guardar un registro.	POST	store()
Actualizar un registro.	PUT	update()
Eliminar un registro.	DELETE	destroy()

Controlador Tabla Viajes:

```
<?php

namespace App\Http\Controllers;

use Illuminate\Http\Request;
use App\Models\Viaje;

class ViajeController extends Controller
{
    //Obtener una lista de registros
    public function index()
    {
        return Viaje::all();
    }

    //Obtener un solo registro
    public function show(Viaje $viaje)
    {
        return $viaje;
    }

    //Crear un nuevo registro
    public function store(Request $request)
    {
        $viaje = Viaje::create($request->all());
        return response()->json($viaje, 201);
    }

    //Actualizar registro
    public function update(Request $request, Viaje $viaje)
```

```

    {
        $viaje->update($request->all());
        return response()->json($viaje, 200);
    }

    //Eliminar registro
    public function delete(Request $request, Viaje $viaje)
    {
        $viaje->delete();
        return response()->json(null, 204);
    }

    //
}

```

4.- SANGRÍA , ESPACIAMIENTO , COMENTARIOS:

Migración: 2023_10_07_052146_create_viajes_table

```

<?php

use Illuminate\Database\Migrations\Migration;
use Illuminate\Database\Schema\Blueprint;
use Illuminate\Support\Facades\Schema;

// Define una nueva clase de migración que hereda de Migration
return new class extends Migration
{
    // Ejecuta las migraciones.

    public function up(): void
    {
        // Usa el método de Schema para definir la estructura de la
        tabla 'viajes'

        Schema::create('viajes', function (Blueprint $table) {
            // Define una columna de incremento automático como clave
            primaria
            $table->bigIncrements('id');
            $table->string('destino');
            $table->date('fecha_salida');

```

```

        $table->date('fecha_regreso')->nullable();
        $table->unsignedBigInteger('ruta_id');

$table->foreign('ruta_id')->references('id')->on('rutas')->onDelete('restrict');

        $table->integer('asiento');
        $table->string('estado');

        // Los timestamps automáticos para created_at y updated_at
        $table->timestamps();
    });
}

// Revierte las migraciones.
// Deshace lo realizado en el método `up` mediante la eliminación
de la tabla 'viajes'.

public function down(): void
{
    // Elimina la tabla 'viajes' si existe
    Schema::dropIfExists('viajes');
}
};

```

5.- BUENAS PRÁCTICAS DE PHP - LARAVEL:

Utiliza PSR (PHP Standards Recommendations): PSR son un conjunto de recomendaciones elaboradas por la comunidad de PHP para estandarizar el código. Por ejemplo, PSR-1 y PSR-2 establecen estándares básicos de codificación y estilo.

Evita el uso de funciones y constructores obsoletos: PHP evoluciona con el tiempo, y algunas funciones o constructores pueden quedar obsoletos. Mantén tu código actualizado y utiliza las funciones más recientes y seguras.

Validación y saneamiento de datos de entrada: Siempre valida y sanea los datos de entrada para prevenir ataques como inyecciones SQL y XSS (Cross-Site Scripting).

Escapa la salida HTML: Utiliza funciones como htmlspecialchars al mostrar datos en el navegador para prevenir ataques XSS.

Manejo de errores y excepciones: Implementa manejo de errores y excepciones para capturar y manejar errores de manera adecuada. Esto facilita la depuración y mejora la robustez del código.

Usa sentencias preparadas o consultas parametrizadas: Para prevenir inyecciones SQL, utiliza sentencias preparadas o consultas parametrizadas en lugar de concatenar directamente los valores en las consultas SQL.

Separa la lógica de presentación y la lógica de negocio: Adopta un enfoque de desarrollo basado en MVC (Modelo-Vista-Controlador) o en algún patrón de diseño similar para mantener una separación clara entre la lógica de presentación y la lógica de negocio.

Organiza tu código: Divide tu código en archivos y carpetas lógicas. Utiliza nombres descriptivos para las clases, funciones y variables. Esto facilita la lectura y el mantenimiento del código.

Implementa el principio de responsabilidad única (SRP): Cada clase o función debería tener una única responsabilidad. Esto mejora la modularidad y facilita las pruebas unitarias.

Optimización de rendimiento: Familiarízate con las mejores prácticas de optimización de rendimiento en PHP, como el uso eficiente de la memoria, la minimización de consultas a la base de datos y el almacenamiento en caché.

Seguridad: Mantén tu aplicación segura siguiendo buenas prácticas de seguridad, como la autenticación segura, el control de acceso adecuado y el uso de funciones de seguridad proporcionadas por PHP.

Documentación: Documenta tu código de manera clara, utilizando comentarios descriptivos. Esto facilita la comprensión del código para ti y para otros desarrolladores que puedan trabajar en el proyecto.

Algunos Comandos Utilizados:

Archivo	Método	Comando	Función
Controladores	UpperCamelCase + Controller	php artisan make:controller PrometheusMetricsController	Crear un controlador
Modelos	UpperCamelCase	php artisan make:model Itinerario	Crea el modelo y las migraciones del modelo
Middleware	UpperCamelCase + Middleware	php artisan make:middleware PrometheusMetricsMiddleware	Crear un middleware
Seeders	UpperCamelCase + TableSeeder	php artisan make:seeder ViajesTableSeeder	Crear un Seeder

6.- BUENAS PRACTICAS DE PROGRAMACION PHP - LARAVEL - SCRIPT

PrometheusMetricsMiddleware:

```
<?php

namespace App\Http\Middleware;

use Closure;
use Illuminate\Http\Request;
use Symfony\Component\HttpFoundation\Response;
use Prometheus\CollectorRegistry;
use Prometheus\Storage\InMemory;
use Prometheus\Storage\Redis;

class PrometheusMetricsMiddleware
{
    private $collectorRegistry;

    public function __construct()
    {
        // Adaptador de almacenamiento persistente(Redis):
        $this->collectorRegistry = new CollectorRegistry(new
Redis(['host' => 'redis-metricas', 'port' => 6379,])); // 'password' =>
'123',

    }

    /**
     * Handle an incoming request.
     *
     * @param  \Closure(\Illuminate\Http\Request):
(\Symfony\Component\HttpFoundation\Response)  $next
     */

    public function handle(Request $request, Closure $next): Response
    {
        $start = microtime(true);

        $response = $next($request);

        $latency = microtime(true) - $start;
        $status = $response->getStatusCode();
        $method = $request->method();
        $endpoint = $request->path();

        // Buckets Personalizados
    }
}
```

```

        $buckets = [0.001, 0.005, 0.01, 0.025, 0.05, 0.075, 0.1, 0.25,
0.5, 1.0, 2.0, 5.0];

        // Contador de respuestas HTTP
        $counter =
$this->collectorRegistry->getOrRegisterCounter('api', 'http_responses',
'HTTP Responses', ['method', 'endpoint', 'status']);
        $counter->inc([$method, $endpoint, strval($status)]);

        // Histograma de latencias
        $histogram =
$this->collectorRegistry->getOrRegisterHistogram('api',
'request_latency', 'Request latency', ['method', 'endpoint'],
$buckets);
        $histogram->observe($latency, [$method, $endpoint]);

        return $response;
    }
}

```

ViajesTableSeeder:

```

<?php

namespace Database\Seeders;

use Illuminate\Database\Console\Seeds\WithoutModelEvents;
use Illuminate\Database\Seeder;
use App\Models\Viaje;
use App\Models\Ruta;
use Illuminate\Support\Facades\DB;

class ViajesTableSeeder extends Seeder
{
    /**
     * Run the database seeds.
     */
    public function run(): void
    {

        //Vaciar Tabla
        //Viaje::truncate();
    }
}

```

```

//Crear datos falsos
$faker = \Faker\Factory::create();

// Obtener todas las rutas
$rutas = Ruta::all();

foreach ($rutas as $ruta) {

    for ($i = 0; $i < 10; $i++) {
        Viaje::create([
            'destino' => $faker->city,
            'fecha_salida' => $faker->date,
            'fecha_regreso' => $faker->date,
            'ruta_id' => $ruta->id,
            'asiento' => $faker->numberBetween(1, 100),
            'estado' => $faker->randomElement(['Programado',
'En curso', 'Completado']),
        ]);
    }
}
}
}

```
